

## TRACK-IT™ DATA LOGGER QUICK START GUIDE - FIRST TIME USE.

**Note:** The Track-It device in this shipment has been programmed into a "deep sleep" mode to preserve battery power and needs to be programmed to "wake up".

To do this you need to install the Track-It software from the CD that accompanied this shipment, if you have not already done this before. If the software is already installed on the computer skip to **1.** below.

Insert the Installation CD into the Drive on your PC. If the installation does not begin automatically use Windows File Explorer to navigate to the CD drive and run CD\_Start.exe. This will launch the installation program.

You need to "Install Software" and "Install USB Driver" as two separate steps. **Do NOT plug the Track-It into the USB port** during this process. You can open the "Software Manual" for full installation details provided you have Adobe Acrobat™ on your system. If you not have Adobe Acrobat™ on your system you can install it with the "Install Acrobat 8.0" option.

1. Once the software is installed start the program by double clicking the Track-It icon shown on the right or select the program from the Start menu.

Once the program is running follow these steps:

2. Plug the Track-It into an available USB port on the PC and **PRESS THE BUTTON ON THE TRACK-IT LOGGER.**
3. The computer should recognize the device - refer to section 2.4 of the Software Manual if needed. (Note - There may be no visual indication at this point)

4. Select the "Device" menu option from the top menu list of the Track-It software then "Device List" from the drop down menu. A window will pop up and show the virtual com port the Track-It has been assigned to. Check the box adjacent to this Com Port and click the "Connect" button

5. Select the "Device Setup" tab (upper left of window) as shown. This will read Configuration data from the Track-It and indicate the Logger Type and the Serial number.

6. Set Time or Check the "Use PC System Time" box in the Time area of the window. (upper right of window)

7. Click the "Send" button under the Device Configuration section of the window (towards the bottom, center).

8. The Track-It is now "awake" and ready for programming. You may continue to program the device - sample rates, triggers, alarms etc. or you can remove it for later programming.
